Attempt : 1

Total Mark : 10

Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Nandhini asked her students to arrange a set of numbers in ascending order. She asked the students to arrange the elements using insertion sort, which involves taking each element and placing it in its appropriate position within the sorted portion of the array.

Assist them in the task.

Input Format

The first line of input consists of the value of n, representing the number of array elements.

The second line consists of n elements, separated by a space.

Output Format

The output prints the sorted array, separated by a space.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 5

67 28 92 37 59

Output: 28 37 59 67 92

Answer

```
#include <stdio.h>

# You are using Python
def insertion_sort(arr):
    for i in range(1, len(arr)):
        key = arr[i]
        j = i - 1
        while j >= 0 and arr[j] > key:
            arr[j + 1] = arr[j]
            j -= 1
        arr[j + 1] = key

    return arr

# Read input values
n = int(input().strip())
arr = list(map(int, input().split()))

# Sort the array using insertion sort
sorted_arr = insertion_sort(arr)

# Print the sorted array
print(" ".join(map(str, sorted_arr)))

int main() {
    int n;
    scanf("%d", &n);
    int arr[n];
    for (int i = 0; i < n; i++) {
        scanf("%d", &arr[i]);
```

```
}  
insertionSort(arr, n);  
printArray(arr, n);  
return 0;  
}
```

Status : Correct

Marks : 10/10
